PRODUCT OWNER WITH A FOCUS ON VALUE CREATION

I have extensive experience in product ownership, requirements work and agile delivery in complex system environments. My strength lies in understanding the full picture, breaking down ambiguous needs and turning them into clear priorities, actionable backlogs and decisions that create real value for both users and the business.

I contribute with structure, clarity and a steady way of working that helps teams deliver with focus and momentum. I enjoy working closely with developers, architects and stakeholders to create alignment, manage expectations and ensure that the team always understands what to build and why.

I also appreciate being part of the day-to-day delivery. Whether it involves clarifying requirements, defining acceptance criteria, supporting testing or contributing hands-on when needed, I see active involvement as a natural part of effective product ownership.

Core Competencies

- Product strategy & roadmap development
- Discovery, user insights & hypothesis-driven development
- Prioritisation & value-based decision making
- Stakeholder alignment & communication
- Leading cross-functional development teams
- Agile facilitation & coaching
- Complex system environments & integrations

Tools & Technologies

- Azure DevOps, Jira, ServiceNow
- Confluence, Miro, PowerBI
- Microsoft 365 tools & services
- MSSQL & Data analysis
- API & system integrations

Certificate

- [Professional Scrum Product Owner I \(Scrum.org\)\(2026\)](#)
- [Professional Agile Leadership I \(Scrum.org\)\(2026\)](#)
- [Professional Scrum Master I & II \(Scrum.org\)\(2026\)](#)
- [PPS - Project manager \(Tieto\)\(2020\)](#)
- [ISTQB - Software Testing Foundation\(2008\)](#)

EXPERIENCE

Agile Lead, Product Manager

Tieto 2021 to present

Leading the development of three laboratory products with responsibility for planning, prioritization, and coordination across teams and stakeholders. My focus is on keeping work organized, creating clear decision material, and ensuring teams have what they need to move forward.

- Translate regulatory, quality and system-level requirements into clear backlog items and acceptance criteria.
- Collaborate closely with architects and senior engineers to balance technical feasibility, risk and long-term maintainability.
- Work in a distributed international environment with cross-functional teams across multiple locations.
- Drive continuous improvement in ways of working, supporting teams in becoming more autonomous and value-focused.
- Introduced clearer prioritization principles, reducing rework and improving delivery capability.
- Regularly represent the product area in customer discussions, clarifying priorities, expectations and delivery plans.

Product Competencies

- Discovery & user interviews
- Data-driven prioritization
- Hypothesis-driven development
- Leading cross-functional development teams
- Backlog refinement & Sprint planning
- Leading in SAFe with multi-team coordination

Professional Courses

- Agile Leadership
- Agile Change Management
- Coaching Leadership
- Strategic LEAN Leadership – Hoshin Kanri

Education

- **EC Utbildning** (2007-2009)
Software Testing Program
- **South Skåne Regiment (P7)** (2006-2007)
Military Service, Fuel Operator
- **Vipeholmskolan** (2003-2006)
Electrical Program, Computer Engineering

Language

- Swedish – Native
- English – Fluent

Product Owner, Scrum Master

Tieto 2018 to 2021

PO for a Scrum team developing a referral and response solution for healthcare. Worked closely with developers, testers, and customer representatives to ensure the team built the right things in the right order.

- Prioritized the backlog based on customer value and technical constraints.
- Facilitated backlog refinement sessions to ensure shared understanding and alignment between developers, testers and stakeholders.
- Introduced clearer acceptance criteria and Definition of Done, improving delivery quality and reducing rework.
- Gathered requirements and clarified user needs through close dialogue with customers and internal experts.
- Worked closely with UX and domain experts to validate assumptions and ensure solutions met real user needs.
- Supported architectural discussions and helped clarify technical constraints and dependencies.

Scrum Master, Project Manager

Tieto 2015 to 2018

Served as Scrum Master for agile teams delivering complex solutions in the healthcare domain. Focused on coaching the team, strengthening collaboration and enabling predictable, high-quality delivery. Combined Scrum Master responsibilities with project management where I ensured alignment with customers and stakeholders.

- Coached the team in agile principles, helping them increase autonomy, collaboration and delivery flow.
- Encouraged constructive feedback and experimentation, strengthening team maturity and shared ownership.
- Removed impediments proactively and worked closely with architects, product owners and managers to ensure smooth progress.
- Supported the team in adopting flow metrics (cycle time, throughput) to drive continuous improvement.
- Led projects from start to delivery with clear planning and risk management.
- Managed customer communication and expectations in complex delivery projects.

Tester, Test Lead and Scrum Master

Tieto 2010 to 2015

Started as a tester and gradually took on more responsibility as Test Lead and Scrum Master. Worked on two major healthcare products.

- Facilitated all Scrum events, including daily stand-ups, sprint planning, reviews and retrospectives.
- Built structured test strategies and processes for new functionality.
- Combined the roles of Test Lead and Scrum Master, supporting both quality assurance and team process maturity.
- Contributed to improvements in team workflows and development processes.
- Designed and executed test strategies for complex healthcare products with high quality and regulatory demands.
- Introduced structured test processes and improved traceability between requirements, test cases and defects.
- Worked closely with developers and domain experts to clarify requirements and ensure early detection of defects.

KEY ACHIEVEMENTS

- Led a process improvement initiative for the order-to-delivery approval flow, eliminating bottlenecks and clarifying responsibilities through a structured RACI model. Introduced value-driven KPIs and PowerBI dashboards that improved visibility, reduced delays and strengthened accountability across teams.
- Organized and facilitated a face-to-face Product Council that aligned priorities, clarified decisions and strengthened cross-team collaboration.
- Secured management buy-in for Scrum by clarifying roles, expectations and ways of working, enabling the team to follow the methodology without organizational obstacles.
- Drove a multi-regional rollout of a new product version, establishing clear governance structures, aligning stakeholders across two customer regions and ensuring a controlled, high-quality transition into production. The initiative strengthened operational stability and improved customer confidence.
- Developed and led the execution of a structured test plan for a regional customer environment, coordinating test activities across teams and securing a stable, validated release.
